Daylight with Windows

Windows are essential in a building for

- Daylight
- Views
- Air Movement

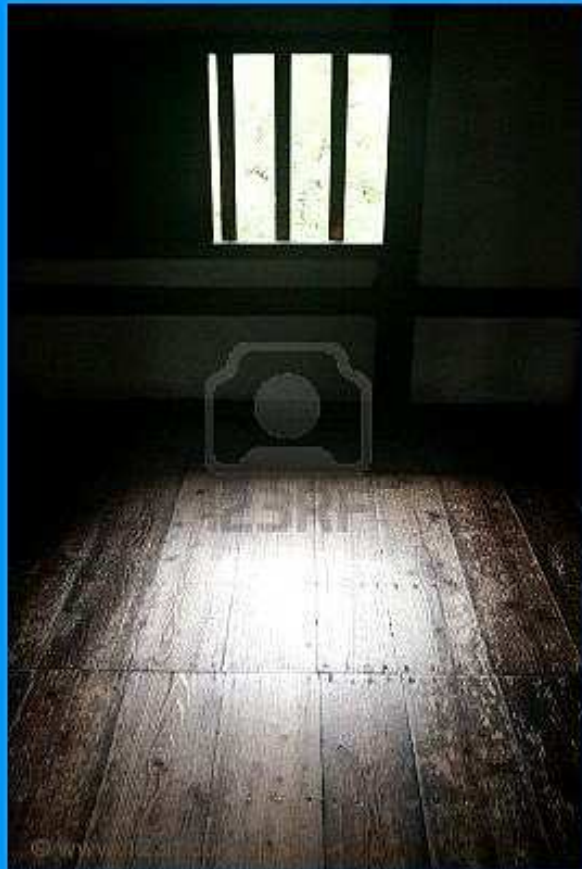

In tropical weather system window shades

- Reduce heat out of highnoon sun
- Protect from rain
- Reduce the penetration of daylight into building

Problem of Daylight with Windows

Windows cannot conduct daylight deep into building. They create bright spots of light

For enhancement of daylight, increasing the size & number of windows will increase

- Heat into building
- Cost of construction & covering them
- Glare

Makes Window Live

Skyshade Innovative Solution – Winlite

Winlite Daylighting system can collect sunlight at all angles of elevation and deliver deep into building space through window.

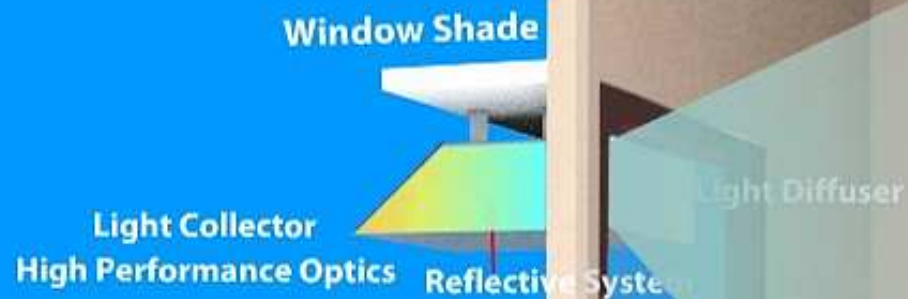

It is fixed beneath the window shades with light collector exposed to sun.

WinLite - How it Works

Light Collector

Optically engineered light collector panel can collect sunlight at all angles of incidence into the system.

Reflective System

The collected light is specularly reflected and transported.

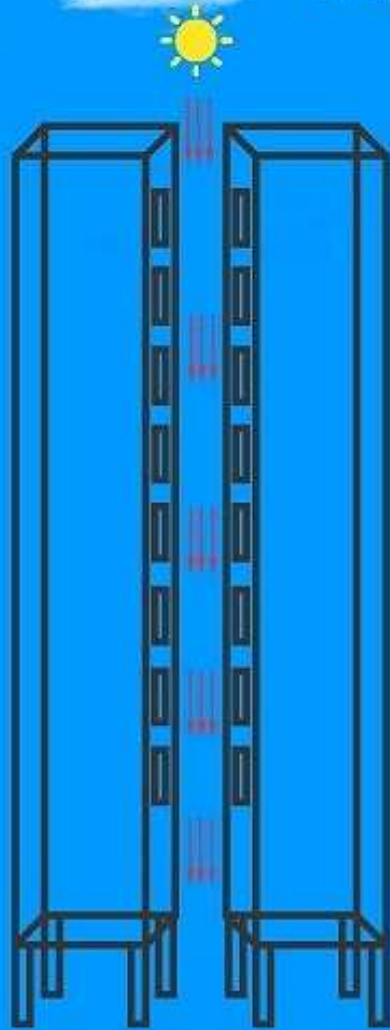

Light Diffuser

The light diffuser spread the light into the building space.

Winlite - At close by buildings

Close by building
windows are helpless to
conduct daylight

Winlite helps this
windows to conduct
daylight

Winlite help you to create a living space that works with nature rather than against it.

WinLite

Makes Window Live
